Frontend Update Report — by Dharva

Hey guys,
 Quick update from my side after fixing up the main pages.

What I fixed

1. All main pages are now responsive

Signup, Sign-in, Navbar, About, ChatBox, Home,Story Form,Public Story, Edit — all adjusted for mobile, tablet, and laptop. Layouts scale properly, no overflow issues.

2. About page now visible after login

Earlier it disappeared from the navbar - fixed.

3. Button hover effect improved

Hover scaling added to all main buttons.
Retro glowing feel is consistent now.

4. Google button alignment fixed

"Or sign in using" + Google button now look clean and centred.
No hover scaling on Google to avoid breaking layout.

5. BEGIN YOUR JOURNEY fixed

Typo resolved.
 Typewriter effect commented out (kept in code, not removed).

What the team needs to do now

1 Make a Forgot Password Page (as per the requirements of the Backend team) and make it and the OTP page responsive.

2. Fix theme consistency

Some elements still show the old blue theme — convert everything fully to the green retro theme.

3. Profile picture issue

Profile image doesn't update everywhere.
 Needs state + storage sync across pages.

<u>Conclusion</u>

Once these remaining parts are fixed, frontend will be fully clean and uniform.
